Digital Literacy Project Report

Name: Ayushi
Course Code: CSE0001
Course Title: Digital Literacy
Program: B.Tech
University: VIT Bhopal University

Introduction

Digital literacy is an essential skill in today's technology-driven world. As a student, developing the ability to use digital tools effectively, communicate professionally, and stay safe online is very important. This project was designed to enhance my understanding of digital platforms and responsible online behavior. Through this project, I worked on creating professional profiles, exploring coding platforms, drafting professional emails, and learning about cybercrime awareness. Each task helped me gain practical experience in using digital tools and building a strong online presence. The project also improved my communication skills and awareness of online safety practices.

Task 1 – Digital Literacy Infographic

For this task, I created a digital literacy awareness infographic using Canva. The infographic included topics such as the importance of digital literacy, safe internet practices, and useful digital tools for students. I designed the infographic with simple icons and clear headings to make it easy to understand. The aim was to create a visual resource that could help my batchmates learn about responsible digital behavior. While creating the infographic, I found it interesting to explore different templates and design elements. The most challenging part was organizing information in a limited space while keeping it visually appealing. This task helped me improve my presentation and design skills.

Task 2 – Digital Portfolio

In this task, I created professional accounts on LinkedIn, Kaggle, and maintained my GitHub profile. LinkedIn helps in building a professional network and showcasing academic achievements. Kaggle is useful for exploring datasets and learning data science concepts. GitHub helps in storing projects and tracking learning progress. Creating these profiles improved my digital presence and helped me understand how these platforms are used by students and professionals. I plan to keep updating these profiles with new skills, projects, and achievements

over the next four years. This task highlighted the importance of maintaining a professional online identity.

Task 3 – Coding & Collaboration Platforms

For this task, I completed a beginner-level Python challenge on HackerRank. This helped me understand the coding platform interface and practice basic programming concepts. I also created a Google Form titled “Digital Literacy Awareness Quiz” with five questions. The responses were automatically collected in Google Sheets. This activity demonstrated how collaboration tools can be used for surveys and quizzes. These tools will help me in academic group work and data collection. This task improved my understanding of coding practice platforms and cloud-based collaboration tools.

Task 4 – Email Etiquette

In this task, I drafted two professional emails. The first email was requesting an extension for assignment submission, and the second email was expressing interest in a summer internship. I followed proper email etiquette such as clear subject lines, formal greetings, structured body, and professional sign-offs. I also created a social media Do’s and Don’ts checklist for responsible online behavior. This task helped me understand how professional communication is important in academic and workplace environments. I learned that emails should be concise, polite, and clearly structured.

Task 5 – Cybercrime Awareness

For this task, I created a case study on UPI/Online Payment Fraud. I explained what the crime is, how it happens, who is targeted, and its consequences. I also prepared a “Stay Safe Online” checklist with prevention tips. This included financial safety tips and reporting channels. While researching, I realized how easily users can fall victim to online fraud. I learned the importance of verifying links and never sharing OTP or UPI PIN. As a result, I will personally be more careful while making online transactions.

Conclusion

This project helped me develop essential digital literacy skills. I learned how to create professional profiles, use collaboration tools, communicate effectively, and stay safe online.

Each task contributed to improving my technical and communication abilities. Overall, this project increased my awareness of responsible digital behavior and strengthened my professional online presence.
